

Well-being

The needs of animals as well as the requirements of modern-day livestock farmers have been integrated into the design of the Serrestal®. As a result, the Serrestal® is a distinctive structure which allows the ideal amount of daylight to enter and create an optimal ventilation. These important aspects contribute to the health and yield of the animals and in addition create an optimal working environment for the farmer. Many people are not aware that, despite the dark colour scheme of the roof, an unprecedented bright environment is created inside without causing extra radiant heat.

Light & Air

Various types of ventilation systems can be used in the side walls of the Serrestal®. Since the introduction of the Serrestal® in 2001, ID Agro has also been able to provide ridge ventilation options in support of cross ventilation. In addition ID Agro uses a large range of high-quality roofing materials which comply to building regulations. In particular for the intensive animal farming industry, we can equip a Serrestal® with an insulated roof while – if required – retaining its trademark translucent roof.

The Cow Lounge™

Modular concept, light, air and low cost

Construction

By applying prefabrication the Serrestal® is very flexible, especially in comparison to a traditional stable. We can customise the stable to your wishes and can deliver a suitable roof for your needs. The modular concept allows for a simple assembly and offers the opportunity to remain flexible and easily expand in every desired direction in the future.

Landscape

Due to its subdued colouring and its limited ridge height a Serrestal® matches well with the scenery. Based on our years of experience and after constructing over 250 Serrestal® stables in the Netherlands, we are able to assist you in designing a comprehensive plan for your stable.

ID Agro

ID Agro is a dynamic company which has been specialising for over a decade in the development of innovative housing systems for the livestock industry. ID Agro's strength is its ability to offer both customised as well as standardised solutions for competitive prices. In designing and constructing the super structure, the lay-out and the wishes of the entrepreneur are our main concern.
